

1. Seam detection on leather and leather imitations

Beige (black) stitching should be detected on beige (black) leather or leather imitations. For this purpose a color sensor type **SPECTRO-3-200-COF-d12.0-CL** will be used. At this, the distance from the color sensor to the surface is approximately 200mm and the spot size is around 12mm. The presence of the beige (black) stitching on the beige (black) leather and leather imitation can be proper detected as shown in the screen shots.
