

### 1. Defect detection on glass plates

Defects on glass plates should be detected. For this purpose a laser through beam sensor type **L-LAS-TB-28-T-CL + L-LAS-TB-28-R-CL** is used. At this, the distance between receiver and transmitter is approximately 150mm and the detecting range is around 28mm. The defects can be proper detected as shown in the screen shots.
