

1. Investigation of lacquered components in regards to gloss and haze

Lacquered components should be controlled in regards to gloss and haze. For this purpose a gloss-structure sensor type **GLAST-85-30°/30°-DIF-1.0/1.0** is used. At this, the sensor is mounted at a distance of approximately 85mm to the lacquered components. The differences in gloss and haze can be proper detected as shown in the screenshots.
