

### 1. Color checking of the paintwork through sight glasses

The color of liquid lacquers should be controlled in using sight glasses. It should be taken into account, that the sight glasses have a reflecting surface. For this purpose, a color sensor type **SPECTRO-3-28-45°/0°-JR** is used at a distance of approximately 18mm to the sight glasses. The color of the liquid lacquers can be proper detected as shown in the screen shots.
