

1. Position control of metal stamping parts

The position of metal stamping parts should be controlled. For this purpose, a laser fork light barrier type **FIA-L-S-0.2-30/40-Q-P-RL** is used. Here, the distance from the transmitter as well as from the receiver to the stamping parts is approx. 15mm and the spot size at this distance is around 0.2mm in diameter. The position of the metal stamping parts can be properly controlled.
