N°307 SPECTRO-3 series

1. Color Differentiation of leather imitations in the automotive field

Different colored leather imitations should be recognized and differentiated. For this purpose, a color sensor type **SPECTRO-3-DIL-SL** is used at a distance of approximately 20mm to the object. The sensor is connected via the RS232 interface to a PLC. The leather imitations can be proper separated as shown in the screen shots.
