

### 1. Presence control of a blue and a green mark on a gray plastic component

A green as well as a blue mark should be present on a gray plastic component. For this purpose a color sensor type **SPECTRO-3-200-COF-d25.0-CL** should be used. The distance of the color sensor to the plastic component is approximately 200mm and the spot size at this distance is around 25mm. The presence of both color marks can be properly detected as shown in the screen shots.
