

1. Color differentiation of lacquered plastic parts at a distance of 100mm

Lacquered plastic parts should be color differentiated. The parts are very glossy and even metallic lacquer should be controlled at a distance of in minimum 100mm. For this purpose a color type **SPECTRO-3-100-COF-d6.0-CL** is used. The spot size at a distance of 100mm is approximately 6mm in diameter. The plastic components can be proper differentiated as shown in the screen shots.
