

1. Contrast sensor in the UV – range: SPECTRO-1-30-UV/UV-9x1

The contrast sensor **SPECTRO-1-30-UV/UV-9x1** is equipped with an UV – ring – lightning source and an UV – detector with an aperture of 9mm x 1mm. The transmitter as well as the receiver is covered with an UV – optical filter, thus only UV – light can pass it. The recommended working distance is 30mm, however, the sensor can be used from 10mm to 80mm (dependent of the object).
