

### 1. Frontend for optical fiber D-S-A2.0-... : MOUNT-A2.0-45°/10

The mounting unit type **MOUNT-A2.0-45°/10** is used in connection with optical fibers type **D-S-A2.0-...** especially for color measurement tasks. At this, the transmitter path is directed under an angle of 45° to the surface of the object, whereas the receiver is looking perpendicular onto the object (45°/0° - color measurement method). Furthermore, the recommended distance of the mounting unit to the object is 10mm.
