

### 1. Laser displacement sensor with a big working distance and a big working range: L-LAS-LT-800-XXL

The laser displacement sensor type **L-LAS-LT-800-XXL** comes with a working distance of approximately 800mm. At this, the measurement range is around 900mm, the minimum distance from the sensor to the object is roughly 350mm and the maximum sensor to object distance is about 1250mm. Furthermore, the resolution of the laser sensor is 0.05mm and the repeatability around 0.3mm.
