

1. Optical front end for A2.0 – optical fibers: KL-M12/90°-XL-A2.0

The optical frontend type **KL-M12/90°-XL-A2.0** can be used in connection with A2.0 – fibers. The spot size has a diameter dependent of the distance (20mm ... 50mm) and lies in the range of 1.5mm and 3mm. The light will be deflected with an internal prism by an angle of 90° in reference to the optical fiber.
