

1. Color sensor with polarization filters and analog as well as digital outputs: SPECTRO-3-30-POL-ANA

The color sensor is equipped with three analog outputs (0V ... +10V) and two digital outputs (at this, up to three colors can be taught). The reference distance is 30mm and the detecting area at this distance is approximately 15mm in diameter. The working range starts from 10mm and goes up to roughly 80mm. The color sensor can be parameterized and monitored via the Windows® software SPECTRO3-ANA-SCOPE V1.0.
