

1. Color sensor type SPECTRO-3-SLU-DIF-JR with side light unit SI-SLU-DIF-16

The color sensor type **SPECTRO-3-SLU-DIF-JR** comes with an external lighting unit type **SI-SLU-DIF-16**. The side light unit is equipped with an optical diffusor (diffusing disk), thus a homogenous diffuse illumination of an object can be realized. The unit can be used in the through beam but also in the forward reflection way, especially for the coating control of glass plates e.g. used for buildings.
