

1. Color fluorescence sensor SPECTRO-3-FIO-UV-SL

The color fluorescence sensor type **SPECTRO-3-FIO-UV-SL** is equipped with an UV-LED and a true color detector. Furthermore a black glass filter arranged in front of the UV-LED is blocking the visible part of the radiation of the UV-LED. Additionally, a UV-light blocking filter is used in front of the true color detector. The color sensor can be used in connection with the adequate optical fibers (UV types) and frontends.
