

1. Color sensor SPECTRO-3-SLU-BA-ANA with external light unit SI-SLU-16

The color sensor **SPECTRO-3-SLU-BA-ANA** comes with an external light unit type **SI-SLU-16** and will be used prior for objects with high light absorbance, e.g. plastic films (through beam) or liquids (with a high turbidity). Thus the aperture of the receiver optics has a diameter of approximately 28mm.
