Windows® Software

Windows® software FLB-TLB-CON8-Scope:

The FLB-CON8 electronic control unit can be easily parameterised with the Windows® user interface. For this purpose the sensor is connected to the PC with the serial interface cable cab-las5/PC (or with USB cable cab-las5/USB). When parameterisation is finished, the PC can be disconnected again.

Windows® user interface:

The products FLB-F, FLB-H, and FLB-V of the FLB Series respectively the products FKB-...-P and SLB-...-P of the TLB Series can be connected to the electronic control unit FLB-CON8. The electronic control unit guarantees a stable voltage supply for the respective transmitter/receiver of the FLB or TLB Series.

The electronic control unit also amplifies and processes the analog signal of the receiver in a suitable manner. A micro-controller performs 12-bit analog/digital conversion of the analog signal, allowing recording and evaluation of the signal characteristics at the sensor. Furthermore the electronic control unit offers various options for intelligent transmitting power control (dirt accumulation compensation) at the sensor.

Parameters and measured values can be exchanged between the PC and the electronic control unit through either the RS232 interface or Ethernet interface (by means of an Ethernet adapter). All the parameters can be stored in the non-volatile EEPROM of the electronic control unit through the interface.

The FLB-TLB-CON8-Scope V3.0 Windows® software facilitates parameterisation, diagnostics, and adjustment of the sensor system. The FLB-TLB-CON8-Scope V3.0 software furthermore features the function of a data recorder that automatically records data and saves them on the PC's hard disk.

The sensor system comprising sensor and electronic control unit is temperature-compensated in a range from 0°C to 80°C.

Firmware updates can be easily performed through the RS232 interface even when the sensor system is installed.

When parameterisation is finished, the electronic control unit continues to run in STAND-ALONE operation, without a PC.
